DETAILED ACTION

Allowable Subject Matter

1. Claims 2, 6 and 18 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3-5, 7-12 and 17 rejected under 35 U.S.C. 103(a) as being unpatentable over Kalkhoran et al. (5,726,40) in view of Bernstein et al. (6,548,338).

Regarding Claims 1, 3-5, 7-12 and 17, Kalkhoran et al. discloses a wavelength selective photodetector where in Fig. 1, silicon dioxide insulating layer 102 divides substrate 102 into layer 108 and 110. Insulating layer 102 extends throughout the substrate 106.

Kalkhoran et al. fail to disclose the required semiconductor element on the epitaxial layer and the required oxide insulation layer. However, Bernstein et al. disclose an integrated high-performance decoupling capacitor and heat sink where in Fig. 4, semiconductor elements are located on surface of the epitaxial layer 12 and the layer 14 is oxide layer.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required oxide insulating layer and the required

semiconductor devices on the epitaxial layer in Kalkhoran et al. as taught by Bernstein et al. in order to have a semiconductor structure with increased performance.
